

# PACK 306

## World Conservation Award Project

**Bees play an essential role in our ecosystem and they depend on flowers, like sunflowers to survive. As a pack, we are going to grow sunflowers and plant them in our yards to create a community wide network of pollen sources for bees.**

- **verify your address with your den leader or the cub master**
- **receive two sunflower seeds, delivered to your home**
- **start your seeds inside in a cup or small flower pot**
- **when they start to sprout and the temperature is warm enough, transfer the plant to a safe spot outside where they can grow to full size. Mid-May to early June is ideal.**
- **watch your sunflower grow and watch for bees who may come to visit**
- **take pictures to share with your den and pack**
